INF3121 Assignment 2, Document 3
Manual Tests That Could Not Be Automated

Even Langfeldt Friberg[*]   Husein Mehmedagic[†]

29th April 2015

1   Test Case: CreateUserAccount.file

The value of `id=wpName2` is *husven_ test3*, but since we already created this user in the manual test, this username is not unique. One could of course change this value to something unique, but the automated test would still fail because the value of `id=wpCatchaWord` was *aryanbusy* when we first interpreted the captcha, and this is completely unlikely to be the answer to a new captcha given.

One could probably make an automated test that copied the source of the captcha image, made use of an online decaptcha service, copied the captcha word and pasted it into `id=wpCaptchaWord`, but we did not find such a service available freely.
